Correas Industriales Dentadas

BTS / Correas Industriales Dentadas

Dentadas

▶ BTS/D

Las correas en "V" de perfil cortado dentadas son sumamente flexibles y aseguran una larga duración y bajo mantenimiento, aún en las exigencias más severas. Características: 1) El neoprene, resistente a los aceites y al ozono, impregnado en telas especiales reduce la fatiga superficial, evitando agrietamientos. 2) Los cordones de polyester-alta resistencia y bajo alargamiento aseguran la absorción de las sobrecargas, eliminando el estiramiento y consecuentemente la necesidad de retensar la correa, garantizando el buen funcionamiento aún con pequeñas poleas. 3) La incorporación del dentado en su estructura permite una resistencia elevada a la deformación, el moldeado exacto de los dientes y una óptima transmisión.
